

JULIÁN ERNESTO CABRERA

Full Stack Developer | Information Systems Engineer (Candidate)

Santa Fe, Argentina | juliancabrersf@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Advanced Information Systems Engineering student and Full Stack Developer specialized in building scalable web applications and high-performance backend architectures. Strong academic foundation in software design, relational and non-relational database modeling, and complex logical problem-solving. Passionate about writing clean, maintainable code focused on delivering robust user experiences.

TECHNICAL SKILLS

- Backend:** PHP (Laravel, Eloquent ORM), Node.js, Express, Java (Hibernate, 3-Tier Architecture), RESTful APIs.
- Frontend:** React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Blade, Bootstrap.
- Databases, Data & BI:** PostgreSQL (PL/pgSQL, Stored Procedures, Triggers), MySQL, MongoDB, Data Warehouses, Data Marts, Pentaho (ETL / OLAP), Query Optimization, Indexing.
- Software Engineering & Architecture:** Software Lifecycle (SDLC), UML Modeling, Logical, Functional & Pure Object Paradigms (Prolog, Racket, Smalltalk/Pharo), Agile Concepts, Graph Theory, Data Structures, RBAC Architecture, OOP, MVC.
- Languages & Systems:** C, C++ (Zinjal), Git, GitHub, Render, JWT Authentication, Docker (Basic).

FEATURED PROJECTS

Flight Management System

Full Stack Developer

Live Demo: flightmanagement-e4u9.onrender.com | Code: github.com/juliancabrera1989/FlightManagement

- Architected an operations platform utilizing Laravel and React with eager loading to optimize database query performance.
- Implemented route optimization engines featuring Dijkstra's algorithm (time-bounded shortest path) and DFS for alternative path enumeration.
- Engineered custom PL/pgSQL procedures in PostgreSQL to batch-generate and simulate 15,000+ flight records with strict temporal consistency.
- Designed dynamic Role-Based Access Control (RBAC) isolating permissions across Airline Staff, Airport Base, and Passenger views.

Dynamic Data Structure Visualizer

Full Stack Developer

Live Demo: structures-frontend.onrender.com | Code (FE): [GitHub \(Frontend\)](#) | Code (BE): [GitHub \(Backend\)](#)

- Developed an interactive canvas visualizer for dynamic linear structures (Linked Lists, Stacks, Queues) with memory restrictions, using React and TypeScript.
- Built a Node.js / Express REST API integrated with MongoDB for persistent storage of custom canvas layouts and user configurations.
- Implemented secure user authentication and session management using JWT (JSON Web Tokens) and bcrypt password encryption.

Static Portfolio Website

Frontend Developer

Live Demo: juliancabrera1989.github.io/static-portfolio/

- Designed and built a lightweight, responsive personal showcase focused on UI consistency, accessibility, and high performance using HTML5, CSS3, JavaScript, and Tailwind CSS.

EDUCATION & LANGUAGES

- Information Systems Engineering (Ingeniería en Sistemas de Información):** Universidad Tecnológica Nacional - Facultad Regional Santa Fe (UTN FRSF) — Senior Student (39/42 Courses Passed). Expected Graduation: Mid-2027.
- English:** Full Professional Proficiency (C1 Level — Fluent technical communication and documentation comprehension).
- Japanese:** Elementary / Basic (JLPT N4 Passed — Certified).
